annexe

list
                                                              ⇄ Interact

| GET | /api/annexe/ |

Query Parameters

The following parameters should be included as part of a URL query string.

Parameter	Description
search	A search term.

```
# Load the schema document
$ coreapi get http://localhost:8080/api/docs/

# Interact with the API endpoint
$ coreapi action annexe list -p search=...
```

create
                                                              ⇄ Interact

| POST | /api/annexe/ |

Request Body

The request body should be a `"multipart/form-data"` encoded object, containing the following items.

Parameter	Description
file required	

Parameter	Description
question [required]	

```
# Load the schema document
$ coreapi get http://localhost:8080/api/docs/

# Interact with the API endpoint
$ coreapi action annexe create -p file=... -p question=...
```

delete

⇄ Interact

DELETE   /api/annexe/{id}/

Path Parameters

The following parameters should be included in the URL path.

Parameter	Description
id [required]	

Query Parameters

The following parameters should be included as part of a URL query string.

Parameter	Description
search	A search term.

```
# Load the schema document
$ coreapi get http://localhost:8080/api/docs/

# Interact with the API endpoint
$ coreapi action annexe delete -p id=... -p search=...
```

config

list

⇄ Interact

GET   /api/config/

```
# Load the schema document
$ coreapi get http://localhost:8080/api/docs/

# Interact with the API endpoint
$ coreapi action config list
```

control

list

| GET | /api/control/

Query Parameters

The following parameters should be included as part of a URL query string.

Parameter	Description
search	A search term.

```
# Load the schema document
$ coreapi get http://localhost:8080/api/docs/

# Interact with the API endpoint
$ coreapi action control list -p search=...
```

create

| POST | /api/control/

Request Body

The request body should be a "application/json" encoded object, containing the following items.

Parameter	Description
title required	Procédure pour laquelle est ouvert cet espace de dépôt
depositing_organization	Organisme qui va déposer les pièces dans cet espace de dépôt
reference_code required	Ce code est utilisé notamment pour le dossier de stockage des réponses

```
# Load the schema document
$ coreapi get http://localhost:8080/api/docs/

# Interact with the API endpoint
$ coreapi action control create -p title=... -p depositing_organization=... -p reference_
```

update

PUT   /api/control/{id}/

⇄ Interact

Path Parameters

The following parameters should be included in the URL path.

Parameter	Description
id required	

Query Parameters

The following parameters should be included as part of a URL query string.

Parameter	Description
search	A search term.

Request Body

The request body should be a "application/json" encoded object, containing the following items.

Parameter	Description
title required	Procédure pour laquelle est ouvert cet espace de dépôt
depositing_organization	Organisme qui va déposer les pièces dans cet espace de dépôt

```
# Load the schema document
$ coreapi get http://localhost:8080/api/docs/

# Interact with the API endpoint

```

partial_update

PATCH   /api/control/{id}/

⇄ Interact

Path Parameters

The following parameters should be included in the URL path.

Parameter	Description
id required	

Query Parameters

The following parameters should be included as part of a URL query string.

Parameter	Description
search	A search term.

Request Body

The request body should be a "application/json" encoded object, containing the following items.

Parameter	Description
title	Procédure pour laquelle est ouvert cet espace de dépôt
depositing_organization	Organisme qui va déposer les pièces dans cet espace de dépôt

```
# Load the schema document
$ coreapi get http://localhost:8080/api/docs/

# Interact with the API endpoint
$ coreapi action control partial_update -p id=... -p title=... -p depositing_organization=
```

users

⇄ Interact

GET /api/control/{id}/users/

Path Parameters

The following parameters should be included in the URL path.

Parameter	Description
id required	

```
# Load the schema document
$ coreapi get http://localhost:8080/api/docs/

# Interact with the API endpoint
$ coreapi action control users -p id=...
```

deletion

delete_control

⇄ Interact

POST   `/api/deletion/{id}/delete-control/`

Path Parameters

The following parameters should be included in the URL path.

Parameter	Description
id **required**	

```
# Load the schema document
$ coreapi get http://localhost:8080/api/docs/

# Interact with the API endpoint
$ coreapi action deletion delete_control -p id=...
```

fichier-reponse

corbeille > update

⇄ Interact

PUT   `/api/fichier-reponse/corbeille/{id}/`

Path Parameters

The following parameters should be included in the URL path.

Parameter	Description
id **required**	

Query Parameters

The following parameters should be included as part of a URL query string.

Parameter	Description
search	A search term.

Request Body

The request body should be a `"application/json"` encoded object, containing the following items.

Parameter	Description

Parameter	Description
is_deleted	Ce fichier est=il dans la corbeille?

```
# Load the schema document
$ coreapi get http://localhost:8080/api/docs/

# Interact with the API endpoint
$ coreapi action fichier-reponse corbeille update -p id=... -p is_deleted=... -p search=..
```

question

read

⇄ Interact

| GET | /api/question/{id}/ |

Path Parameters

The following parameters should be included in the URL path.

Parameter	Description
id required	

Query Parameters

The following parameters should be included as part of a URL query string.

Parameter	Description
search	A search term.

```
# Load the schema document
$ coreapi get http://localhost:8080/api/docs/

# Interact with the API endpoint
$ coreapi action question read -p id=... -p search=...
```

questionnaire

create

⇄ Interact

| POST | /api/questionnaire/ |

Request Body

The request body should be a `"application/json"` encoded object, containing the following items.

Parameter	Description

# Interact with the API endpoint
$ coreapi action session keep_alive
```

theme

update

⇄ Interact

PUT   /api/theme/{id}/

Path Parameters

The following parameters should be included in the URL path.

Parameter	Description
id required	

Query Parameters

The following parameters should be included as part of a URL query string.

Parameter	Description
search	A search term.

Request Body

The request body should be a `"application/json"` encoded object, containing the following items.

Parameter	Description
title required	
order	
questionnaire	

```
# Load the schema document
$ coreapi get http://localhost:8080/api/docs/

# Interact with the API endpoint
$ coreapi action theme update -p id=... -p title=... -p order=... -p questionnaire=... -p
```

partial_update

⇄ Interact

`PATCH` `/api/theme/{id}/`

Path Parameters

The following parameters should be included in the URL path.

Parameter	Description
`id` required	

Query Parameters

The following parameters should be included as part of a URL query string.

Parameter	Description
`search`	A search term.

Request Body

The request body should be a `"application/json"` encoded object, containing the following items.

Parameter	Description
`title`	
`order`	
`questionnaire`	

```
# Load the schema document
$ coreapi get http://localhost:8080/api/docs/

# Interact with the API endpoint
$ coreapi action theme partial_update -p id=... -p title=... -p order=... -p questionnaire
```

user

---

list

⇄ Interact

`GET` `/api/user/`

Query Parameters

The following parameters should be included as part of a URL query string.

Parameter	Description
search	A search term.

```
# Load the schema document
$ coreapi get http://localhost:8080/api/docs/

# Interact with the API endpoint
$ coreapi action user list -p search=...
```

create

POST /api/user/

⇄ Interact

Request Body

The request body should be a `"application/json"` encoded object, containing the following items.

Parameter	Description
first_name required	
last_name required	
email required	
profile_type required	
organization	
control	

```
# Load the schema document
$ coreapi get http://localhost:8080/api/docs/

# Interact with the API endpoint
$ coreapi action user create -p first_name=... -p last_name=... -p email=... -p profile_ty
```

current
